CSE Alum featured in December Issue of NSF "CS Bits & Bytes"

CSE alum Sameer Agarwal ('06) is featured in the December issue of the NSF "CS Bits & Bytes" newsletter. After completing his PhD with Professor Serge Belongie and Sameer Agarwal joined Steve Seitz's group for a postdoc at University of Washington, where he carried out the ground breaking research in large scale optimization for multiview geometry described in this article. Sameer is currently a software engineer at Google and an affiliate professor in the Computer Science Department at University of Washington. Congratulations, Sameer!

CSE Alum's passion for design leads to award at 2013 International CES show

re Berracasa, a CSE Alum, says he owes his whole career to his education from UCSD. In 1978 he earned Bachelor's degree in Computer Engineering. He is currently a Principal Engineer at MaxLinear, a Carlsbad-based semiconductor company. At the 2013 International Consumer Electronic Show, one of his products developed for MaxLinear was recognized at the show with a Design and Engineering Award in embedded technologies category. The device, called the MxL267, is a part of a cable modem or set-top box and can receive and transmit data much better, allowing for better high-speed Internet access. The device can receive 24 downstream channels and send 8 downstream channels. Berracasa advised recent graduates to stick to their dreams. "It is important to realize that your first job may have a profound effect on your whole career," he said. "Do not compromise and accept a position which is misaligned with your aspirations. If you are an engineer, chances are you will want to innovate. Try to find a job which gives you that opportunity. Design! You have plenty of time to integrate and test later."
